

LUMA PLUS™

READ ENTIRE LABEL BEFORE USE

DESCRIPTION: LUMA PLUS is a superior adjuvant-extender designed for use with a wide range of post-emergence herbicides, growth regulators, insecticides and fungicides. Superior surface characteristics and penetrating effects on surface waxes of leaves makes LUMA PLUS a viable additive to any spray operation. Because LUMA PLUS is non-volatile and quickly absorbed, cosmetic leaf burn that is often experienced at higher temperatures and humidity ranges is greatly diminished when LUMA PLUS is used.

COMPATIBILITY: Generally, this product is compatible with most herbicides, pesticides, growth regulators, etc. and no mixing problems should be encountered. To preclude the occurrence of any problem that might be caused due to excessively low pH ranges, LUMA PLUS should be added to the spray tank prior to the addition of the chemical. LUMA PLUS is highly soluble and dissolves quickly with minimal agitation. Once dissolved, inversion problems should not be encountered. Water hardness/softness will not effect the use of LUMA PLUS.

IMPORTANT NOTICE: Information contained herein is in no way intended to supplement or amend any other product label. Before using any pesticide or other chemical, always read and observe all direction, precautions, restrictions and other information appearing on that label and consider such as your authoritative source of information

Superior Spray Additive

DIRECTIONS FOR USE: Generally, LUMA PLUS should be used at the rate of 4-5 ounces per acre on most agricultural, industrial and commercial turf or ornamental spray operations.

AGRICULTURAL USES:

- ◆ Pre-Plant burn down, also minimum and no till operation
- ◆ Early directed post emergence operations
- ◆ Canopy spray post emergence

Generally, the higher LUMAPLUS rate is desirable when the larger target species are encountered.

INDUSTRIAL USES: Use with all sprays where the objective is to control existing vegetation

COMMERCIAL TURF AND ORNAMENTAL USE: Use at the rate of 4-5 ounces per acre in spray volumes of 50-60 gallons per acre or less for increased chemical efficacy and reduced cosmetic burn of the non-target species. Where rates exceeds 60 gallons per acre use additional LUMA PLUS but do not exceed 7 ounces per acre.

ACTIVE INGREDIENTS

Polymerized Pyro-phosphatic	
Surfactant-emulsifier blends	99.000%
Diglycol Stearates	0.653%
5-Phosshomevalcnate, isopentenyl	
Farmestyl-Pyrophosphate	0.007%
Inert	0.340%
Total.....	100.000%

CAUTION KEEP OUT OF REACH OF CHILDREN
